

Water Weekly

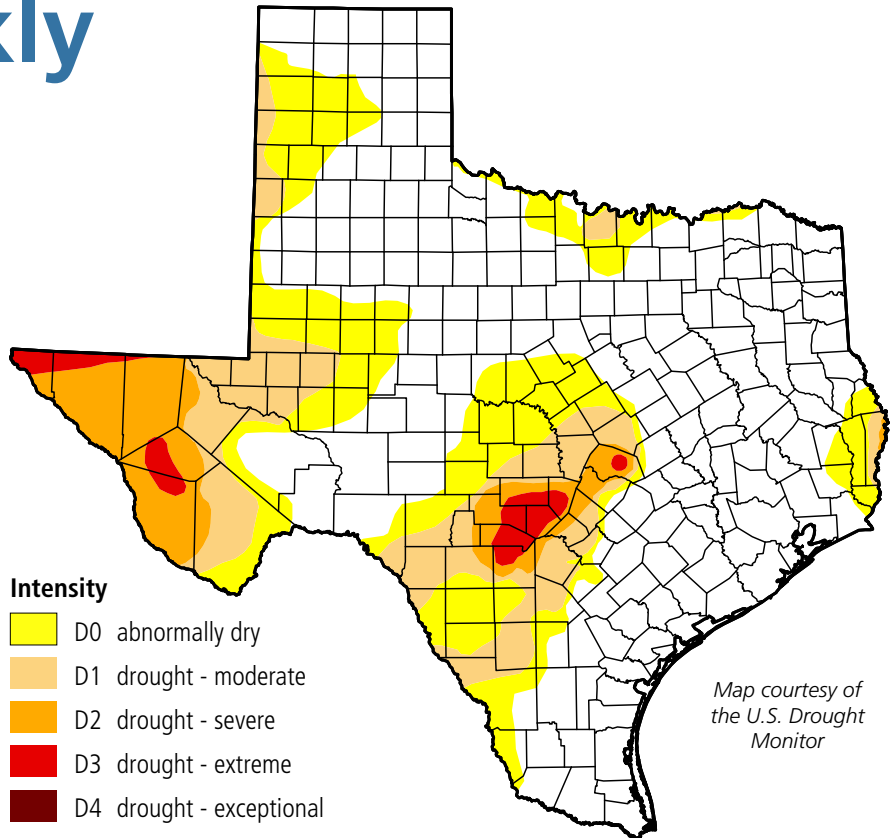

For the week of 02/12/24

Water conditions

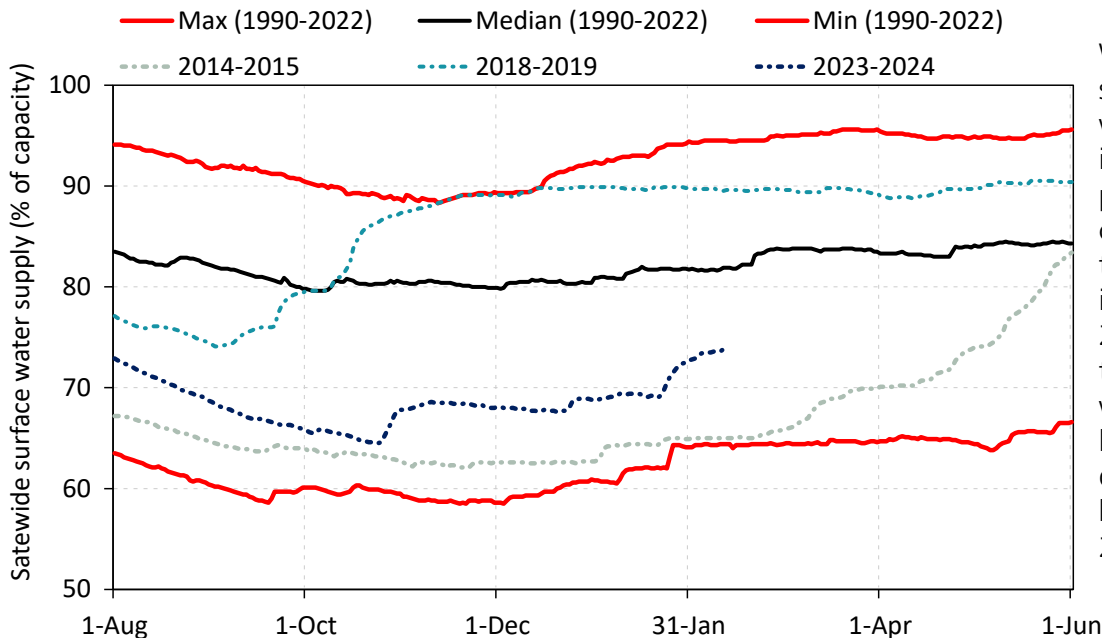

The latest drought map for conditions as of February 6 shows continued improvement in the last week, particularly in the eastern half of the state. Drought area has reached its lowest value statewide since mid-October 2021 but remains entrenched in Central and West Texas.

Drought conditions

- ◆ 21% now
- ◆ 23% a week ago
- ◆ 65% three months ago
- ◆ 53% a year ago

Water supply and El Niño update

Water stored in our statewide surface water supply reservoirs increased by 3.9 percentage points of capacity during January, the largest monthly increase since October 2018. Compared to previous El Niño winters, supplies have not recovered as quickly as 2018-2019, but are ahead of the 2014-2015 pace.
