

Water Weekly

For the week of 11/03/25

Water conditions

The latest drought map for conditions as of October 28 shows a decrease in drought area from the previous week—the first weekly decrease in seven weeks. Conditions improved in Central, North, and East Texas but continued to degrade in parts of the Panhandle and along the coast.

Drought change in the last month

Despite last week's improvements, drought has expanded to cover an additional 9 percent of the state since the end of September, which is the second and largest monthly increase since March 2025. Erratic rainfall in October resulted in an inconsistent pattern of drought improvements and degradations across the state.
