

# Water Weekly

For the week of 08/02/21

## Water conditions

The latest drought map for conditions as of July 27 shows two patches of drought in Brewster-Presidio and Culberson-Hudspeth counties in West Texas. These areas amount to slightly more than 1 percent of the state, which is the smallest area of the state in drought since June 2019.

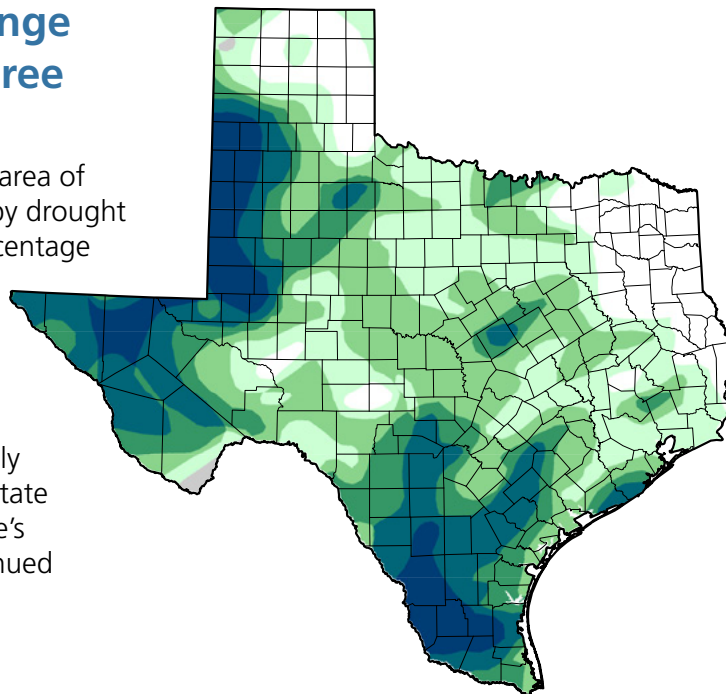

## Drought conditions

- ◆ 1% now
- ◆ 3% a week ago
- ◆ 65% three months ago
- ◆ 34% a year ago

## Drought change in the last three months

Since late April, the area of the state impacted by drought has declined 64 percentage points. Since mid-April we've experienced the largest three-month decline in drought since 2001. With only one percent of the state left in drought, there's little room for continued improvement in the coming weeks.
